Qno3: I have very mixed experience related to these ML questions because I still struggle to understand how the changing of parameters affects our model but it was quite fun to see how different types of searches can affect the result of our model drastically. But I think I still don't have a deep understanding of everything because right now we have been working on some type of test in class, it would be really good if we apply these algorithms to big data and then see how they perform calculations and how they are working in real-life.
